

Star card

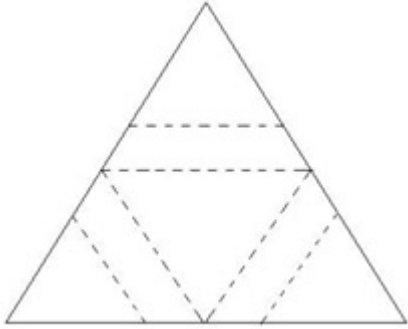

By Delys Cram

1. Cut down your paper to 30 x30cm

2. Mark the centre (15cms) and draw a line in pencil down approx. 4cms as shown.
3. With a ruler draw a line from the corner to it hits the line. This measurement will be 30cm. Repeat on the other side.
4. When all sides measure 30cm, cut out the triangle.

5. Measure 15cms on all three sides and **score between the points** as shown by dotted line in diagram.
6. Measure 5cm from centre triangle points and score between as shown by diagram. NB make sure you measure from the centre triangle and not the outer triangle as it won't fold properly if you make that mistake.
7. Fold the centre triangle score line valley fold and the outside triangles mountain fold.
8. Fold up overlapping each point of the star like you would a box.
